Array Is Scanned
.DAT and .CEL files are created and stored on Affy LIMS
VALIDATE
(Does the .CEL file exist?
Is the .CEL file the right size?
Builds the worklist)
3
Feeds worklist to Image Processing Scripts
4
IMAGE PROCESSING
(Load .CEL file and calculate metrics)
Feeds metric files to QCDB
2
Affymetrix LIMS Database (v3.0)
Data is fed into QC Wkbch based on user requests
QC WORKBENCH
(Software to allow user to review metrics results. Filter window allows user to request different datasets. Link to Affymetrix MAS 5.0 Software can allow .DAT file viewing (Visual QC) and link to QUALMS can allow masking. Pass/Fail result is assigned and recorded back to QCDB)
6
Data is fed into QC Wkbch based on user requests
5
Chipdefects Database (aka QCDB)
.CEL FILE ANALYSIS TO CREATE .CHP FILE
(Nightly script that activates the Affymetrix LIMS to start analyzing. Worklist is derived from passfail results entered into QCDB.)
7
PUBLISH .CHP FILES TO PRODUCTION DATABASE
(A multistep process that follows, but is separate from the QC process)
